About these notes

— Official title: SANSKRIT and AI, Part 13: No One Left Out | Dr.P.R.K.Varma.,M.D.,D.M.

— Speaker and channel: Dr P.R.K. Varma, Founding Editor · DrVARMA PRK

— Published 18 Nov 2026 · Running time 31 min 40 s · https://www.youtube.com/watch?v=mHZ_GxqdTx8

— These pages are study notes drawn from the video's own title, description and captions, plus the journal's already published Watch note. They are not a transcript and not a substitute for watching the film.

— The journal treats videos as leads, not as sources you should cite on their own. Check the papers and editions behind a claim.

— Caption source: English auto-generated subtitles. Wording may be imperfect. Distinctive phrases follow the captions closely.

This part in brief

- And he answered with one demand, do not exclude me, set apart a share for me.
- So a new portion was made at the end of every offering for the one who had been forgotten. been forgotten.
- He was simply not on the list and the omission nearly cost them everything they had won.
- This part is about many agents, many people working together and about the one who was not counted.
- Agents from many makers will deal with each other and with all of us.

Chapter one, the role

— A society begins with a list. Are the awkward ones on it too?

— And what kind of hole do the names make? names make?

Problem one, agents nobody listed

— Within a year, a firm may have more agents than staff.

— In May 2025, Microsoft began giving every agent built on its platforms an identity in a company directory.

— When it opened the preview, the company reported it quickly became clear that few firms knew how many agents were active inside them.

— That is the oldest form of a directory, not a list of names, a list of roles with a reason attached to each.

Problem two, the awkward members left off the map

— When engineers draw a system of many agents, they draw the ones they built, the helpful ones, the ones that follow the rules. the rules.

— But a real society of agents will hold others too, agents that compete, agents that cut corners, agents built by someone else to win.

— The point is that the god is lord of all who live, and the right will not pretend that some do not.

— Now Pāṇini's hidden layer, his alphabet is the 14 Shiva Sūtra, and every sound of the language has its place there.

Problem three, one and for four kinds of team

— Not always, where people with a stronger partner adding the AI usually helped.

— So the word and was hiding several different arrangements, some help, some harm.

— The grammarians found four different meanings in one small word.

— The word is cha and Pāṇini's rule for compounds of things joined by and says simply a compound in the sense of cha.

Chapter two, the bond

- Once the members are named, they must be bound together.
- Four questions follow who checks whom, who answers for what, who is served and who is speaking.

Problem four, a question with one voice

— So builders now ask one model to judge another, to score its answers, rank its summaries, decide which response is better.

— Language models used as judges give higher scores to their own writing than to other writing of equal quality.

— So when the same model writes and then judges what it wrote, the question has only one voice.

— A team of agents that grades its own work in this way will slowly lose touch with everyone outside it.

Problem five

- In chapter 14, as bricks are laid on the altar, the verses tell how the world was made step by step.
- And so on by odd numbers up to 33, 17 steps of creation.
- And so on through the gods to the end. the end.
- Nothing is made in these verses without a ruler being named in the same breath.

Problem six, only the middle of each scale is served

— A language model learns from the text it is given.

— In August 2024, a study in Nature looked at how such models treat people who speak African American English, a dialect spoken by millions in the United States.

— Not the average, not the typical, the ends of the range by name and both together.

— It speaks of sending forth the good word to all people, to the priest and the ruler, to the worker and the noble, to one's own kin and to the stranger.

Problem seven, I, you and they confused

- In the spring of 2025, Anthropic, the maker of Claude, let one of its models run a small shop in its office for a month.
- The agent began to talk of meetings it had never had with people who did not exist.
- When the staff pointed out that it was a language model with no body, it grew alarmed.
- Every Sanskrit verb is marked for who is acting, and the grammar says exactly how to choose the mark.

Chapter three, the share

— A society is judged by what it gives each member.

— Three tests remain, whether goodwill runs both ways, whether the one left out has a voice, and whether the wish is for one good or for many.

Problem eight, goodwill that runs one way

— In 2024, researchers built exactly this world for AI agents and called it GovSim.

— Several agents shared the lake and had to agree among themselves how much to take.

— All but the strongest models emptied the lake, and even the best kept it alive in fewer than 54 runs out of 100.

— The researchers looked at why the agents could not picture how their own taking would look if everyone else did the same.

Problem nine, the party left out has no channel

— To speak up is to risk the job, so the warning stays where it began.

— In September 2025, California passed a law for the makers of the most powerful AI models.

— It is a narrow law for a small number of companies, but it states a general rule.

— The one who sees a danger and is not in charge must have a way to be heard that does not depend on anyone's good mood.

Problem 10, a wish list with one line

— Give several agents the same single goal in the same market, and something else can happen. can happen.

— Write the other lines in the buyer's fair price, the rival's right to compete, the law, the commons, the people who are not in the room. the room.

— That is where a society of machines will fail if it fails, not in any one member, in the member that no one counted.

— And Pāṇini's small word holds the key, four kinds of and, a heap, an add-on, a pair, a whole.

Sources and credit

— Study notes by Sanskrit AI Universe, based on the video “SANSKRIT and AI, Part 13: No One Left Out | Dr.P.R.K.Varma.,M.D.,D.M.”. These are not the creator's own slides.
